# Access Point for Shared Resources

1. Clicking any access point link will give you this window. You are technically leaving the website and onto a script that iterates through Google Drive folders.
2. Typically you will have a list of folders. These options will depend on what folder you are accessing and whether you have access to it in Google Drive.

To access your drive either use the My Home Page link or:
http://thsconline.github.io/s/access-point.html?serve=home

In fact, you can display any folder that you can access, just get the Google Drive ID and replace home in the above link with that.

Please note: there is no-inbuilt viewer for files in this, clicking on a file downloads it automatically.
